

INSTRUCTIONS

Thanks for purchasing this add-on. To use the graphic styles please follow the instructions below -

1. Open the EPS file using the file/open menu - this will load the styles (I've also included an AI file which will open in the same way in Illustrator CS5+).
2. Open the 'Graphic Styles' tab. This can be found in the 'Windows' menu at the top of the screen.
3. Type a line of text and set it to 100pt (alternatively you could draw a vector shape).
4. Clear the text's stroke and fill values so that it's transparent.
5. Select the piece of text (or vector shape) using the 'selection tool'.
6. Click one of the icons on the 'Graphic Styles' tab and the style will be applied.

Tips -

If moving or scaling the text and you want the effects and patterns to be transformed too, make sure the settings on the transform tab as set as shown in **FIG. A** before you do so.

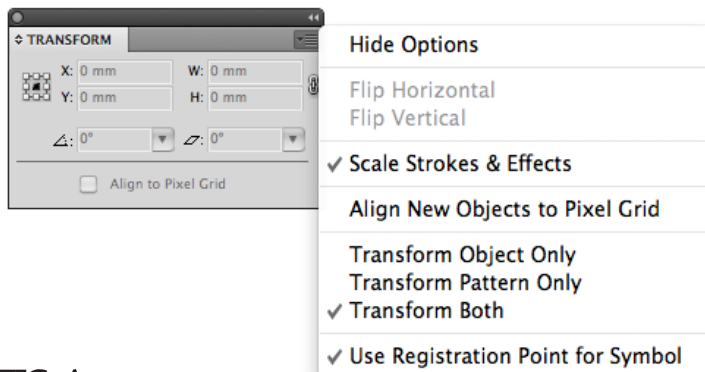

FIG. A

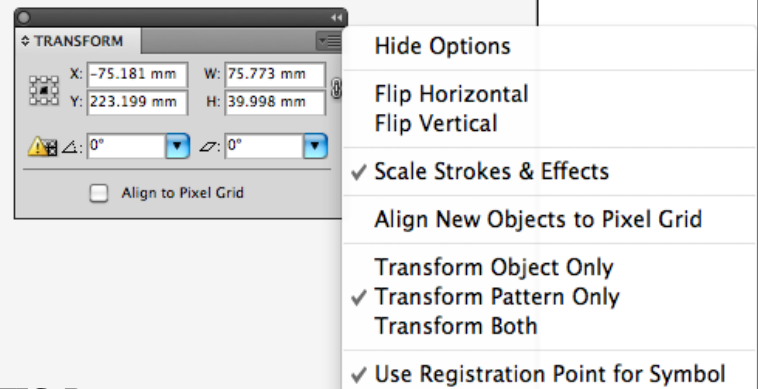

FIG. B

If you want to scale just the patterns then set the 'Transform Tab' settings as in **FIG. B** and adjust the number values in the 'W' and 'H' boxes.

If you want to move the patterns independently of the text then have the 'Transform Tab' settings as shown in **FIG B** and type number values in the 'X' and 'Y' box.

If you like these styles please rate them!
